

Summer camps for animal lovers

Veterinary camps for kids are ideal for the little ones who are interested in pursuing careers in the field of animal science. Through lectures, demonstrations and hands-on opportunities, campers can learn basic skills in working with animals, like animal husbandry, handling and basic medical care.

Camps provide the opportunity to learn what it is like to be a veterinarian. They will learn the signs and symptoms that can differentiate a healthy animal from a sick one. They are able to conduct exams, including weighing, measuring, taking temperatures and other vital statistics on a wide variety of animals. They are given the opportunity to create and update patient records and use a microscope to look for and identify internal parasites.

Vet summer camps enable the kids to look at real x-rays and learn what they can tell us about the condition of an animal by an x-ray. They are taught how to give injections, how to suture, and how to trim hooves, toe nails and flight feather.

Kids also enjoy the experience of watching real surgeries as they are being performed in the surgery room by veterinarians. Campers will learn about dogs, cats, birds and small pocket pets, as well as farm animals and a wide variety of exotic animals. The camp has several different species of animals to give the kids a complete and thorough experience they will cherish.
